1. Introduction

Jewelry businesses often face challenges in managing customer relationships, sales, inventory, and after-sales services effectively. Traditional methods like paper records or simple spreadsheets are inefficient and prone to errors. To overcome these challenges, a CRM (Customer Relationship Management) application tailored for jewel management helps streamline customer interactions, track sales, manage inventory, and enhance customer satisfaction.

This project aims to design and develop a CRM application specifically for jewelry shops and showrooms, integrating both customer engagement and inventory management features into a single platform.

2. Objectives

To provide a centralized system for managing customer information and purchase history.

To automate jewelry sales, billing, and order tracking.

To maintain accurate records of jewelry inventory, including gold, silver, diamonds, and custom designs.

To track customer preferences and suggest personalized offers.

To generate reports for sales, profits, and stock management. To improve customer loyalty through better after-sales support and reminders (e.g., polishing, warranty, festivals).

3. Scope

The CRM application will include the following modules:

1. Customer Management - Customer profiles, purchase history, preferences.
2. Inventory Management - Adding, updating, and tracking jewelry stock.
3. Sales & Billing - Automated invoice generation, payment tracking.
4. Order Management - Custom orders, repair services, delivery tracking.
5. Loyalty & Offers - Discounts, festival offers, and loyalty points.
6. Reports & Analytics - Daily/weekly/monthly sales reports, stock alerts.

7. Admin Panel - Manage users, roles, and permissions.

4. Technology Stack (suggested)

Frontend: ReactJS / Angular / HTML, CSS, JavaScript

Backend: Node.js / Java / Python (Django/Flask)

Database: MySQL / PostgreSQL / MongoDB
CRM Integration Tools: Salesforce APIs (optional) or custom-built modules

Hosting/Deployment: AWS / Azure / Local server

5. Benefits

Easy tracking of customer data and preferences.

Efficient jewelry stock and sales management.

Reduction in manual errors and duplicate records.

Improved customer satisfaction and retention.

Business insights through automated reports.

6. End Users

Jewelry shop owners/managers.

Sales executives.

Customers (through a possible customer-facing portal or app).

MILESTONE1:SALESFORCE DEVELOPER ACCOUNT CREATION

Activity 1 : Creating Developer Account

Creating a developer org in salesforce.

1. Go to <https://developer.salesforce.com/signup>
2. On the sign up form, enter the following details :

Build enterprise-quality apps fast and get hands-on with Agentforce and Data Cloud.

Sign up for your Developer Edition.

- ✓ Build apps fast with drag-and-drop tools
- ✓ Go further with Apex code
- ✓ Build AI agents with Agentforce
- ✓ Harmonize your data with Data Cloud
- ✓ Ground Agentforce with structured and unstructured data
- ✓ Integrate with anything using APIs

Sign up for your Developer Edition
A free Salesforce Platform environment with Agentforce and Data Cloud

First name: divyasritha ✓ Last name: R ✓

Job title: Developer ✓ Work email: srcw2322j103@srcw. ✓

Company: Sri Ramakrishna College ✓ Country/Region: India ✓

Your org may be provisioned on or migrated to Hyperforce, Salesforce's public cloud infrastructure.

☐ I agree to the Main Services Agreement – Developer Services and Salesforce Program Agreement. I acknowledge, as described in the Developer Documentation: (1) the Developer Edition includes autonomous and other generative AI features; and (2) Salesforce may limit use of those features and the org, and may terminate any org that has been inactive for 45 days.

We value your privacy. To learn more, visit our Privacy Statement.

Activity 2 :Account Activation

1. Go to the inbox of the email that you used while signing up. Click on the Reset Password to activate your account. The email may take 5-10mins.

Seller Home Good morning, MONISHA. Let's get selling!

My Goals

Today's Events

MILESTONE 2 :OBJECT

Activity 1 :Creating jewel customer object

The purpose of creating a Jewel Customer custom object is to store and manage information about Customer.

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.

1. Enter the label name : Jewel Customer
2. Plural label name : Jewel Customers
3. Enter Record Name Label and Format
 - Record Name >> Customer name
 - Data Type >> Text

2. Click on Allow reports.
3. Allow search and click Save.

Activity 2: Create a Item Object

The purpose of creating a Item object is to manage the inventory of gold and silver items.

To create an object:

1. From the setup page >> Click on Object Manager >> Click on Create >> Click on Custom Object.
1. Enter the label name >> Item
2. Plural label name >> Items
3. Enter Record Name Label and Format
 - Record Name >> Item Id
 - Data Type >> Auto Number
 - Display Format >> Item-{00}
 - Starting Number >> 1
2. Click on Allow reports.
3. Allow search >> Save.

Note: Create 3 more objects with label names as Customer Order, Price, Billing

(Use “Auto Number” as a data type for Customer Order, Price, Billing).

MILESTONE 3: TABS

Activity 1: Create a Custom Tab

To create a Tab:(Customer)

1. Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under custom object tab)
2. Select Object(Jewel Customer) >> Select any tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) keep it as default >> Save.

Activity 2 : Create a Tab:(item)

1. Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under custom object tab)
2. Select Object(Item) >> Select the tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) keep it as default >> Save.

Note: Now create tabs for Customer Order, Price, Billing objects.

MILESTONE 4 :THE LIGHTNING APP

Activity 1 : Create a Lightning App

To create a lightning app page:

1. Go to setup page >> search “app manager” in quick find >> select “app manager” >>
2. click on New lightning App

3. Then click Next >> (App option page)Set Navigation Style as Console Navigation >> Next.

(Utility Items) keep it as default >> Next.

4. To Add Navigation Items:

Search for the item in the (JewelCustomer,Item,CustomerOrder,Price,Billing,Reports, Dashboard) from the search bar and move it using the arrow button ? Next? Next.

Search profiles (System administrator) in the search bar >> click on the arrow button >> save C finish.

MILESTONE 5: FIELDS

Activity 1: Creating Lookup Relationship

1. Go to the setup page >> click on object manager >> type object name(Customer Order) in the quick find bar >> click on the object.
2. Click on fields C relationship >> click on New.
3. Select “Lookup relationship” as data type and click Next.
4. Select the related object “Jewel Customer”.
5. Give Field Label as “Customer” and click Next.
6. Next >> Next >> Save.

Activity 2 : Creating a Master-Detail Relationship

To Create a Master-Detail relationship :

1. Go to the setup page >> click on object manager >> type object name(Customer Order) in the quick find bar >> click on the object.
2. Click on fields & relationships >> click on New.
3. Select “Master-Detail relationship” as data type and click Next.
4. Select the related object “ Item”.
5. Give Field Label as “Item” and click Next.
6. Next >> Next >> Save.

Activity 3: Creating Text Field in Jewel Customer Object

To create fields in an object:

1. Go to setup >> click on Object Manager >> type object name(Jewel Customer) in quick find bar >> click on the object.

2. Now click on “Fields & Relationships” >> New

5. Fill the above as following:
 - Field Label: City
 - Length : 20
 - Field Name : gets auto generated
 - Click on Next >> Next >> Save and new.

Activity 4 : Creating the Phone field in object Jewel Customer

To create fields in an object:

1. Go to setup >> click on Object Manager >> type object name(Jewel Customer) in quick find bar >> click on the object.
2. Now click on “Fields C Relationships” >> New
3. Select Data type as “Phone” and click Next.
4. Given the Field Label as “ Phone”.

The screenshot shows the Salesforce Setup interface. At the top, there's a search bar and navigation tabs for Setup, Home, and Object Manager. The 'Object Manager' tab is selected, and the 'Jewel Customer' object is chosen. The left sidebar shows a navigation menu with 'Fields & Relationships' selected. The main area displays the 'New Custom Field' wizard for the 'Jewel Customer' object. The wizard is at 'Step 2 of 4: Enter the details'. The 'Field Label' is 'Phone', 'Field Name' is 'Phone', 'Description' is empty, and 'Help Text' is empty. The 'Required' checkbox is unchecked, and 'Auto add to custom report type' is checked. The 'Default Value' is 'Show Formula Editor'.

1. Field Name will be auto populated, and click on Next >> Next >> Save C new.

Activity 5: Creating the Email field in object Jewel Customer

To create fields in an object:

1. Go to setup >> click on Object Manager >> type object name(Jewel Customer) in quick find bar >> click on the object.
2. Now click on “Fields C Relationships” >> New
3. Select Data type as “Email” and click Next.
4. Given the Field Label as “ Email”.
5. Field Name will be auto populated, and click on Next >> Next >> Save.

Activity 6 : Creating the number field in Item object

To create fields in an object:

1. Go to setup >> click on Object Manager >> type object name(Item) in quick find bar? click on the object.
2. Now click on “Fields C Relationships” >> New
3. Select Data type as “Number” and click Next.
4. Given the Field Label as “ Purity” and length as “ 2 ”.

The screenshot shows the Salesforce Setup interface. At the top, there's a search bar and navigation tabs for 'Setup', 'Home', and 'Object Manager'. The 'Object Manager' tab is selected, showing a list of objects. The 'Item' object is selected, and the 'New Custom Field' wizard is open. The wizard has four steps, and we are currently at 'Step 2 of 4: Enter the details'. The 'Field Label' is 'Purity', 'Length' is '2', and 'Decimal Places' is '0'. The 'Field Name' is also 'Purity'. A sidebar on the left shows navigation options like 'Details', 'Fields & Relationships', 'Page Layouts', 'Lightning Record Pages', 'Buttons, Links, and Actions', 'Compact Layouts', 'Field Sets', 'Object Limits', and 'Record Types'.

5. Field Name will be auto populated, and click on Next >> Next >> Save.

Activity 7 : Creating Picklist Field in Item Object

To create fields in an object:

1. Go to setup >> click on Object Manager >> type object name(Item) in quick find bar>> click on the object.
2. Now click on “Fields C Relationships” >> New.
3. Select Data type as “Picklist” and click Next.
4. Enter Field Label as “Item Type”.
5. In values select “Enter values(Gold,Silver), with each value separated by a new line” and enter values as shown below.

New Custom Field

Field Label: Gold price

Please enter the length of the number and the number of decimal places. For example, a number with a length of 8 and 2 decimal places can accept values up to "12345678.90"

Length: 8 Decimal Places: 0

Number of digits to the left of the decimal point

Number of digits to the right of the decimal point

Field Name: Gold_price

Description:

Help Text:

4. Enter Field Label as “Gold Price” and length as “ 8”and decimal 0.Field name will be auto generated.
5. Click Next >> Next >> Next >> Save .

Activity G : Creating Formula Field(Cross Object) in Item Object

To create fields in an object:

(Note:Create a Lookup Relationship in Item Object to Price Object with Field Name:Prices)

1. Go to setup >> click on Object Manager >> type object name(Item) in quick find bar? click on the object.
2. Now click on “Fields & Relationships” >> New.
3. Select Data type as “Formula” and click Next.
4. Give Field Label and Field Name as “Gold Price” and select formula return type as “Currency” and click next.

The screenshot shows the Salesforce Setup interface. At the top, there's a search bar and navigation tabs for Setup, Home, and Object Manager. The 'Object Manager' tab is selected, and the 'Item' object is chosen. The left sidebar shows a navigation menu with 'Fields & Relationships' highlighted. The main content area displays the 'New Custom Field' wizard for the 'Item' object, specifically 'Step 2 of 6: Choose output type'. The 'Field Label' is 'Gold price' and the 'Field Name' is 'Gold_price'. The 'Formula Return Type' is set to 'Currency'. The 'Auto add to custom report type' checkbox is checked. The wizard includes a 'Previous' button, a 'Next' button, and a 'Cancel' button. The bottom of the screen shows a status bar with the text 'Waiting for smartbridges/67-dev-ed.lightning.force.com...' and 'and automatically add the percent sign to the number.'

5. Under Advanced Formula write down the formula :Prices_r.Gold_price__c / 10.

6. click “Check Syntax” and Next >> Next >> Save C New.

Activity 10 : Creating Remaining Fields in Objects

Now create the remaining fields using the data types mentioned.

Activity 11: Schema Builder

Schema Builder is a powerful tool within Salesforce that allows you to visualise, explore, and design the relationships between objects in your Salesforce organisation. It provides a graphical representation of the data model, making it easier to understand the structure and connections between different objects.

Activity 12 : Creating the Field Dependencies

Use case:

Field Dependencies are used to create relationships between fields within an object. They allow you to control the visibility and availability of fields based on the values selected in other fields.

1. Go to setup >> click on Object Manager >> type object name(Item) in quick find bar >> click on the object.
2. Click on Fields & Relationships and click on the Priority field.
3. Search for Field Dependencies and click on New.

4. Select Controlling Field as “Priority” and Depending field as “Expected Days of Return” >> Continue.

New Field Dependency Help for this Page

Create a dependent relationship that causes the values in a picklist or multi-select picklist to be dynamically filtered based on the value selected by the user in another field.

- The field that drives filtering is called the “controlling field.” Standard and custom checkboxes and picklists with at least one and less than 300 values can be controlling fields.
- The field that has its values filtered is called the “dependent field.” Custom picklists and multi-select picklists can be dependent fields.

Step 1. Select a controlling field and a dependent field. Click Continue when finished.

Step 2. On the following page, edit the filter rules that control the values that appear in the dependent field for each value in the controlling field.

Continue Cancel

Controlling Field: None--

Dependent Field: None--

Continue Cancel

5. Select the “Expected Days of Return” values of related Priority values and Click on Include Values >> Save.

Activity 13 : Creating the validation rule

Creating the validation rule

Creating the validation rule for Postal Code field in Jewel Customer object

Note : check whether the fields mentioned in the formula field are created or not , if not go to activity 10 and create those fields mentioned in Jewel Customer object.

1. Go to setup >> click on Object Manager >> type object name(Jewel Customer) in quick find bar>> click on the object.
2. Click on the validation rule >> click New.
3. Enter the Rule name as “Postal Code “.
4. Insert the Error Condition Formula as : -

AND(
OR(

LEN(Zip_Postal_code_c) <> 6, NOT(REGEX(Zip_Postal_code_c, "[0-9]{6}\$"))),
NOT(ISBLANK(Zip_Postal_code_c))

)
)

The screenshot shows the 'Validation Rule Edit' window for a rule named 'ZipPost Code'. The formula is: `LEN( Zip_Postal_code_c ) <> 6, NOT(REGEX(Zip_Postal_code_c, "[0-9]{6}$"))', NOT(ISBLANK(Zip_Postal_code_c))`. The error message is 'Must contain 6 digits'. The error location is set to 'Field' and the specific field is 'ZipPost Code'.

3. Enter the Error Message as “Must contain 6 digits”, select the Error location as Field and select the field as “Zip/Postal code”, and click Save.

Create Validation rule for Item object.

1. Enter Rule name as “ValidationRule For Item“.
2. Insert the Error Condition Formula as : -
`OR(ISBLANK(Amount_c) , ISBLANK(Customer_Name_c) ,ISBLANK(Gold_price_c),ISBLANK(KDM_c),ISBLANK(Ornament_c),ISBLANK(Percentage_c),ISBLANK(Making_Charges_c),ISBLANK(Prices_c),ISBLANK(Stone_weight_c),ISBLANK(Silver_price_c),ISBLANK(Stone_other_price_c),ISBLANK(Stone_weight_c),ISBLANK(Weight_c))`
3. Enter the Error Message as “Please fill Required fields”, select the Error location as Top of Page and click Save.

MILESTONE 6 : PROFILES

Activity 1: Gold Smith Profile

1. Go to setup >> type profiles in quick find box >>click on profiles ? clone the desired profile (System Administrator) >> enter profile name (Gold Smith) >> Save.
2. While still on the profile page, then click Edit.
3. Scroll down to Custom Object Permissions and Give access permissions for Jewel Customer,Item,Customer Order,Prices,Billings .

MILESTONE 8: USERS

Activity 1: Create User

1. Go to setup >> type users in quick find box >> select users >> click New user.
2. Fill in the fields
 1. First Name : Niklaus
 2. Last Name : Mikaelson
 3. Alias : Give a Alias Name
 4. Email id : Give your Personal Email id
 5. Username : Username should be in this form: text@text.text
 6. Nick Name : Give a Nickname
 7. Role : Gold Smith
 8. User licence : Salesforce
 9. Profiles : Gold Smith

The screenshot shows the Salesforce 'User Edit' page for a user named Niklaus Mikaelson. The page is divided into two main sections: 'General Information' and 'User License'. The 'General Information' section contains fields for First Name (Niklaus), Last Name (Mikaelson), Alias (nmika), Email (nadeem@thesmartbridge.co), Username (nicklaus@nick.org), Nickname (nicklaus), Title, Company, Department, and Division. The 'User License' section contains a dropdown for Role (Gold Smith), a dropdown for User License (Salesforce), and a dropdown for Profile (Gold Smith). The Role, User License, and Profile dropdowns are highlighted with a red box. Below these are several checkboxes for user types: Marketing User, Offline User, Knowledge User, Flow User, Service Cloud User, Site.com Contributor User, Site.com Publisher User, WDC User, Data.com User Type (set to None), Data.com Monthly Addition Limit (set to 300), Accessibility Mode (Classic Only), High-Contrast Palette on Charts, Load Lightning Pages While Scrolling (checked), Debug Mode, and Send Apex Warning Emails.

1. Save.

Note:

Create two more users as mentioned in activity 2 using the same profile.

MILESTONE 6:PAGE LAYOUTS

Activity 1: To Create a Gold Page layout

Go to Setup >> Click on Object Manager >> Search for the object (Item) >> From drop down click on Edit.

Click on Page layout >> Click on New.

Give Page layout Name as “Page Layout for Gold” and click on Save and New.

Arrange the field as shown in the Information Section ,remove fields which are related to Silver and click Ok.

Click Save.

Make sure your page layout looks like the picture above.

Activity 2: To Create A Silver Page Layout

1. Go to Setup >> Click on Object Manager >> Search for the object (Item) >> From drop down click on Edit.
2. Click on Page layout >> Click on New.
3. Give Page layout Name as “Page Layout for Silver” and click on Save.
4. Arrange the field as shown in the Information Section ,remove fields which are related to Gold and click Ok.

MILESTONE 10: RECORD TYPES

Activity : To Create A Record Type

1. Go to setup >> click on Object Manager >> type object name(Item) in quick find bar? click on the object.
2. Click on the Record Types >> click New.

3. Select Existing Record as “Master”, Record type Label as “Gold”, Description as “Gold items information”.

4. Scroll down and check for the Gold Smith, Worker JW C System Administrator profile and click on Next.

5. Select “Apply a different layout for each profile”, and change page layout to “Page Layout for Gold” for Gold Smith, Worker and System Administrator ? save C new.

Activity 2: Create another Record Type with name “Silver” following the steps from Activity 1.

Note: Use page layout for Silver.

MILESTONE 11: PERMISSION SETS

Activity : Create A Permission Sets

A permission set is a collection of settings and permissions that give users access to various tools and functions. Permission sets extend users' functional access without changing their profiles. Users can have only one profile but, depending on the Salesforce edition, they can have multiple permission sets.

1. Go to setup >> type “permission sets” in quick search >> select permission sets >> New.

2. Enter the label name as “Per to Worker”, API will be auto populated ? save.

3. Under Apps Select object settings.

4. Click on Items object ? click on Edit ? under Item:Record Type Assignments,enable Gold,Silver ? Object permission check for read ,edit and create.

MILESTONE 12:TRIGGER

Activity 1:Creating A Trigger Handler Class

Trigger handler:

A trigger handler is a design pattern that organises trigger logic into separate classes. This helps in keeping code organised, reusable, and easier to maintain. The trigger handler class contains methods that handle the specific logic for different trigger events, improving code structure and readability. This approach is particularly useful for complex triggers or projects with multiple triggers, as it promotes modular coding practices and reduces the chances of code duplication.

CODE:

```
public class UpdatePaidAmountTriggerHandler {  
  
    public static void handleBeforeInsert(List<Billing__c> newBillings) {  
  
        for (Billing__c billing : newBillings) {  
  
            billing.Paid_Amount__c = billing.Paying_Amount__c;  
  
        }  
  
    }  
}
```

```

    public static void handleBeforeUpdate(Map<Id, Billing__c> oldBillingsMap,
    List<Billing__c> updatedBillings) {
        for (Billing__c billing : updatedBillings) {
            Billing__c oldBilling = oldBillingsMap.get(billing.Id);
            Decimal oldPaidAmount = oldBilling.Paid_Amount__c;
            billing.Paid_Amount__c = oldPaidAmount + billing.Paying_Amount__c;
        }
    }
}

```

Activity 2: Create A Trigger

CODE:

```

trigger UpdatePaidAmountTrigger on Billing__c (before insert, before update) {
    if (Trigger.isInsert) {
        UpdatePaidAmountTriggerHandler.handleBeforeInsert(Trigger.new);
    } else if (Trigger.isUpdate) {
        UpdatePaidAmountTriggerHandler.handleBeforeUpdate(Trigger.oldMap, Trigger.new);
    }
}

```

MILESTONE 13: USER ADOPTION

Activity 1: Create a Record (Jewel Customer)

1. Click on App Launcher on the left side of the screen.

2. Search Jewelry Inventory System C click on it.

3. Click on Drop Down and Click on the Jewel Customer tab.
4. Click New.

5. Fill the Details and click on Save.

Activity 2: View a Record(Jewel Customer)

1. Click on App Launcher on the left side of the screen.
2. Search Jewelry Inventory System C click on it.
3. Click on the Jewel Customer Tab.
4. Click on any record name. you can see the details of the Jewel Customer

Activity 3: Delete a Record(Jewel Customer)

1. Click on App Launcher on the left side of the screen.
2. Search Jewelry Inventory System C click on it.
3. Click on the Jewel Customer Tab.
4. Click on Arrow at right hand side on that Particular record.

5. Click delete.

Note: Create at least 10 records for each of the objects: Jewel Customer, Price, Item, Customer Order and Billing.

MILESTONE 14: REPORTS

Activity 1 : Create A Reports

1. Go to the app >> click on the reports tab
2. Click New Report.

3. Select report type from category or from report type panel or from search panel ? click on start report.

4. Customise your report

- Add fields from the left pane as shown below.

5. Save or run it.

Note: Reports may get varied from the above pictures as the data might be different.

Activity 2: Reports

1. Go to the app >> click on the reports tab
2. Click New Report.

3. Select report type from category or from report type panel or from search panel ? click on start report.

Customise your report

- Add fields from the left pane as shown below.

5. Save or run it.

Item Price	Asset Price	Item Price
1	100.000000	100.000000
2	100.000000	100.000000
3	100.000000	100.000000
4	100.000000	100.000000
5	100.000000	100.000000
6	100.000000	100.000000
7	100.000000	100.000000
8	100.000000	100.000000
9	100.000000	100.000000
10	100.000000	100.000000

Note: Reports may get varied from the above pictures as the data might be different.

MILASTONE 15: DASHBOARDS

Activity : Create A Dashboards

1. Go to the app >> click on the Dashboards tabs.

2. Give a Name and click on Create.

New Dashboard

* Name
Dashboard 1

Description

Folder
Private Dashboards Select Folder

Cancel Create

3. Select add component.

4. Select a Report and click on select.

5. Click Add then click on Save and then click on Done.

Activity 2: Create another Dashboard as we discussed in activity 1.

MLESTONE 16 : FLOWS

Activity :Create A Flow

1. Go to setup >> type Flow in quick find box >> Click on the Flow and Select the New Flow.

2. Select the Record-triggered flow and Click on Create.

3. Select the Object as a “Billing” in the Drop down list.
4. Select the Trigger Flow when: “A record is Created or Updated”.

5. Select the Optimise the flow for: “Actions and Related Records” and Click on Done.

Configure Start

Select Object

Select the object whose records trigger the flow when they're created, updated, or deleted.

* Object

Item

Configure Trigger

* Trigger the Flow When:

☐ A record is created

☐ A record is updated

☒ A record is created or updated

☐ A record is deleted

Set Entry Conditions

Specify entry conditions to reduce the number of records that trigger the flow and the number of times the flow is executed. Minimizing unnecessary flow executions helps to conserve your org's resources.

If you create a flow that's triggered when a record is updated, we recommend first defining entry conditions. Then select the **Only when a record is updated to meet the condition requirements** option for When to Run the Flow for Updated Records.

Cancel Done

6. Now change the mode from Auto-layout to free-form.
7. Now select the manger option in the toolbox, click New resource.
8. Select the resource type as text template.

New Resource

*Resource Type

Select...

Variable

Store a value that can be used and changed throughout the flow.

Constant

Store a value that can be used but not changed throughout the flow.

Formula

Calculate a value when the formula is used in the flow.

Text Template

Store text that can be used and changed throughout the flow.

Stage

Identify different phases in the flow to track user progress.

9. Enter the API name as “Email body”.

Edit Text Template

* API Name

EmailBody

Description

* Body

Insert a resource...

View as Plain Text

Hello

Customer Name: {{Record.Item__r.Customer_Name__r.Name}}

Cancel Done

10. Change the view as Rich Text ? View to Plain Text.

11. In the body field paste the syntax that is given below.

Hello

Customer Name: `{!$Record.Item_r.Customer_Name_r.Name}`

Here are the details for the item you purchased with Jewellery Inventory System

Item Type: `{!$Record.Item_r.Item_Type_c}`

Ornament: `{!$Record.Ornament_c}`

Weight: `{!$Record.Weight_c}`grams

Amount: `{!$Record.Amount_c}`

12. Click done.

13. Now click on elements, and drag the action element into the preview pane.

14. Their action bar will be opened in that search for “ send email ” and click on it.

15. Give the label name as “ notice”

16. API name will be auto populated.

17. Enable the body in set input values for the selected action.

18. Select the text template that was created.

19. Include Recipient Address list, select the email form the record.

`{!$Record.Item_r.Customer_Namer.Email_c}`

20. Include the subject as “Welcome to Jewelry Inventory System ”.

21. Click done.

22. Now drag the path from the start to the action element.
23. Click on save. Given the Flow label , Flow Api name will be auto populated.
24. And click save, and click on activate.

CONCLUSION

Conclusion

The CRM application for jewel management successfully streamlines and modernizes the way jewelry businesses manage their customer relationships, inventory, and sales processes. By integrating customer data, purchase history, and personalized preferences, the system enables jewelers to deliver a more engaging and customer-focused experience.

Additionally, it enhances operational efficiency through features such as order tracking, sales analysis, inventory management, and follow-up reminders.

This project demonstrates how a CRM tailored to the jewelry industry not only improves customer satisfaction and loyalty but also assists business owners in making informed decisions based on real-time data. Overall, the application provides a sustainable, user-friendly, and scalable solution that bridges the gap between traditional jewelry business practices and modern digital transformation.
